B. Use of Estimates in the Preparation of the Financial Statements

The preparation of financial statements in conformity with Statutory Accounting Principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities. It also requires disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the period. Actual results could differ from those estimates.

C. Accounting Policy

(11) Management's Policies and Methodologies for Estimating Liabilities for Losses and Loss/Claim Adjustment Expenses

When setting reserves, the Company employs the 5 methods that are described below. Based on the estimates of these methods and also retrospective considerations, the company sets a best estimate and then an explicit margin is added to ensure that the estimate is sufficient. The average of the methods, as well as the spread of the estimates, is also considered when setting the respective liabilities. Aggregate liabilities are tested against other aggregate estimation methods to check for reasonableness, and any additional margin or adjustments are made

a. Aggregate Method: 12 months of paid claims are subtracted from 12 months of estimated incurred claims to get the liability estimate

b. 3 Month Average Method: For the base liability estimate, the average liability of the third, fourth, and fifth month prior to the current month is used. Adjustments are made for trend, membership change, and backlog to determine the current month's estimate of liability.

c. Previous Year's IBNR Method This method is similar to the Three Month Average Method, except that the actual reserve from one year ago is used as the base estimate of liability. This is projected forward using adjustments for trend, membership change, and backlog.

d. CY Lag Method: This method calculates completion factors by incurral year. Completion factors used for the current year are based on the previous year's experience. Completion factors for the most recent 3 years are set manually.

e. 12 Month CF Method: This method is identical to the CY Lag Method, except that historical completion factors are based on 12 months of rolling data.

(12) Changes in the Capitalization Policy and Predefined Thresholds from Prior Period

No change in the capitalization policy this year.

For fixed-rate agency mortgage-backed securities, Clearwater Analytics calculates prepayment speeds utilizing Mortgage Industry Advisory Corporation (MIAC) Mortgage Industry Medians (MIMs). MIMs are derived from a semi-monthly dealer-consensus survey of long-term prepayment projections. For other mortgage-backed, loan-backed, and structured securities, Clearwater utilizes prepayment assumptions from Moody's Analytics. Moody's applies a flat economic credit model and utilizes a vector of multiple monthly speeds as opposed to a single speed for more robust projections. In instances where Moody's projections are not available, Clearwater uses data from Reuters, which utilizes the median prepayment speed from contributors' models.
